SUMMARY

Front-End / Full-Stack Developer with production experience in React, TypeScript, and modern UI architecture, focused on building performant, accessible, and scalable web applications. Experienced in responsive interface development, component-based systems, Git workflows, and collaboration with product and design teams. Recently building full-stack SaaS products with Next.js, Prisma, PostgreSQL, authentication flows, workspace-based architecture, and real business logic. Open to remote Front-End or Full-Stack opportunities.

CORE SKILLS

- **React, Next.js, TypeScript, JavaScript**
- **HTML5, CSS3, SCSS, Tailwind CSS**
- **Prisma, PostgreSQL**
- **Authentication & session flows (NextAuth)**
- **Component architecture & reusable UI systems**
- **Responsive design & cross-browser compatibility**
- **Accessibility (semantic HTML, ARIA, WCAG basics)**
- **Web performance & Lighthouse optimization**
- **Git / GitHub workflows, pull requests, code reviews**
- **SEO basics (metadata, semantic structure)**
- **Building dashboard and SaaS-style product interfaces**

PROFESSIONAL EXPERIENCE

Front-End Developer — eLearning Industry | 2025

- Developed and maintained production UI in React & Tailwind, improving consistency and reducing UI regressions, through components reuse and structured styling.
- Built responsive UIs across devices/browsers, ensuring design system consistency with UX team.
- Improved accessibility & SEO foundations using semantic HTML and structured components.
- Collaborated with team members to align implementation with product requirements.
- Used GitHub PR workflow + reviews to ship changes safely.

SELECTED PROJECTS

OrbitOps — Full-Stack SaaS Platform (In Development) | GitHub | Live

- Built a multi-tenant SaaS workspace platform using **Next.js, TypeScript, Prisma, PostgreSQL, NextAuth, Tailwind CSS, and Resend.**
- Implemented workspace-scoped architecture to isolate data across clients, projects, tasks, billing, and settings.
- Developed full CRUD flows for clients, projects, and tasks, including inline editing, deletion, and entity relationships across the application.
- Added authentication, invite/email flow, billing settings, and live dashboard metrics powered by real workspace data.
- Structured the platform around real product logic rather than static UI, including role-ready workspace foundations, plan usage tracking, and operational dashboard flows.

Antonis-portfolio (React + TypeScript) - GitHub | Live

- Built a **TypeScript-based React SPA** with modular components, ensuring maintainability and scalability aligned with modern web application standards.
- Implemented **responsive UI across devices and browsers**, following semantic HTML practices and accessibility considerations (ARIA labels, proper heading structure).Implemented reusable components and responsive layouts across the application.
- Optimized **web performance and Lighthouse** metrics through code splitting, image optimization, and efficient component rendering.
- Used **Git workflow with structured commits and PR mindset**, mirroring collaborative development with designers and UX-driven iterations.
- Implemented reusable components and **separation of concerns similar to component-library philosophy.**

EDUCATION

BSc (Hons) Computer Games Development — University of Derby
